Objectives

- To make the awareness of the industrial areas of the students
- To provide the unique opportunities of professional education to students

Summary Report of Monthly Seminar Series

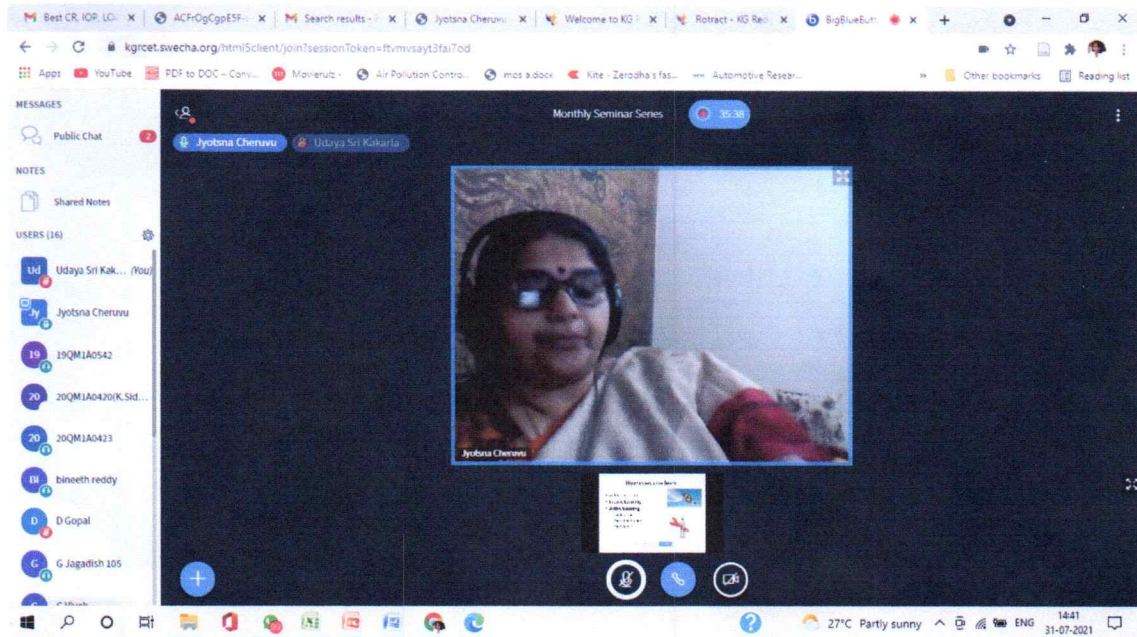

Figure Showing Introduction Of Industries

The speaker started as a engineering technologies idance' conflict. If academia has to provide the patients and research talent, industry necessarily has to provide the finances and other facilities based on it. This is an invariable and essential agreement between the two parties that they can walk out of only at their own peril. The profound ethical concerns that industry funded research has brought center-stage need a close look, especially as they impact patients, research subjects, public trust, marketability of products, and research and professional credibility.

How can the intermediate goal of industry (patient welfare) serve the purpose of the final goal of academia is the basic struggle for conscientious research institutions /associations. And how best the goal of maximizing profits can be best served, albeit suitably camouflaged as patient welfare throughout, is the concern of the pharmaceutical industry.

A very great potential conflict of interest lies in the fact that academia needs the sophisticated instruments that only big funding can provide, while at the same time resists the attempts of the fund provider to set the agenda of research, protocol, design, publication, the works. Conflicts arise at many steps and levels of functioning, and are related to the expectations, competing interests, and

conflicting priorities of the different entities involved, whether they are the academic medical centers, the funding agencies, the patients and their families, or the investors and venture capitalists.

companies translate biologic advances into useable products for patients. They do it for a profit motive, but they do it, and it needs to be done.” ... many collaborations with pharmaceutical companies were conducted on a high professional level...The infusion of Without industry funding, important advances in disease.

It makes more sense for the researcher and institution to forego such temptations and/or walk out of such investments as soon as possible.

While mainstream medicine and research are booming, as is connected industry, concerns about professional commitment to patient welfare are growing too. Increasing corporate influence is challenging certain long held and fundamental values of patient care, which will have far reaching implications for biomedical care and the future progress of mainstream medicine.

Explicit in the design were three levels of interaction: between the coach and her learner, between coaches, and between learners. This networking aspect was considered when events were planned to support what we called our Coaching Community. Over the course of this year, coaches and learners have been meeting regularly. and sessions were offered in April, June, July and August, with another planned On the last day of January in 2011, WIN held our kick-off event, which involved a highly orchestrated session of "speed networking," as well as small-group interactions, to allow coaches and learners to become acquainted. Preparation for the event included each participant completing a survey on leadership attributes, which led to a suggested "match" between coaches and learners. The WIN steering team provided each learner with 2-3 coaches to meet and rank in order of preference following the event. Coaches also provided brief biographies to help the learners discern who might be the best coach for their specific goals. Fortunately and coincidentally. a nearly equal number of learners and coaches were identified, and ultimately around 35
